Q1. Food Delivery Billing System (Multiple Inheritance using Two Interfaces)

Score: 0.00 TC: 0/3 passed

CODE

```
import java.util.Scanner;
interface DeliveryCharge{
    double calculateDeliveryCharge(double foodCost);
}
interface CouponDiscount{
    double calculateDiscount(double foodOrder,String couponCode);
}
public class FoodOrder implements DeliveryCharge,CouponDiscount{
    public double calculateDeliveryCharge(double foodCost){
        if(foodCost>=500){
            return 0.0;
        }
        else{
            return 50.0;
        }
    }
    public double calculateDiscount(double foodCost,String couponCode){
        if(couponCode.equals("SAVE10")){
            return foodCost*0.10;
        }
        else{
            return 0.0;
        }
    }
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);
        double foodCost=sc.nextDouble();
        sc.nextLine();
        String couponCode=sc.nextLine();

        FoodOrder f1=new FoodOrder();
        double deliveryCharge=f1.calculateDeliveryCharge(foodCost);
        double discount=f1.calculateDiscount(foodCost,couponCode);
        double finalBill=foodCost+deliveryCharge-discount;
        System.out.println("Food Cost:"+foodCost);
        System.out.println("Delivery Charge:"+deliveryCharge);
        System.out.println("Discount:"+discount);
        System.out.println("Final Bill:"+finalBill);
    }
}
```

INPUT

600
SAVE10

OUTPUT

Food Cost:600.0
Delivery Charge:0.0
Discount:60.0
Final Bill:540.0

Q2. Hotel Billing System (Multiple Inheritance using One Class and One Interface)

Score: 0.00 TC: 0/3 passed

CODE

```
import java.util.Scanner;
class Room{
    int roomNumber;
    String guestName;
    double roomRent;

    void getRoomDetails(int roomNumber,String guestName,double roomRent){
        this.roomNumber=roomNumber;
        this.guestName=guestName;
        this.roomRent=roomRent;
    }
}
interface ServiceCharge{
    double calculateServiceCharge();
}
public class HotelBill extends Room implements ServiceCharge{
    public double calculateServiceCharge(){
        if(roomRent>=5000){
            return roomRent*0.12;
        }
        else{
            return roomRent*0.08;
        }
    }
    void displayDetails(){
        double serviceCharge=calculateServiceCharge();
        double finalBill=roomRent+serviceCharge;

        System.out.println("Room Number:"+roomNumber);
        System.out.println("Guest Name:"+guestName);
        System.out.println("Room Rent:"+roomRent);
        system.out.println("Service Charge:"+serviceCharge);
        System.out.println("Final Bill:"+finalBill);
    }
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);
        int roomNumber=sc.nextInt();
        sc.nextLine();
        String guestName=sc.nextLine();
        double roomRent=sc.nextDouble();
        HotelBill h=new HotelBill();
        h.getRoomDetails(roomNumber,guetName,roomRent);
        h.displayDetails();
    }
}
```

OUTPUT

```
